

# CAP-ITS

Pool Deck Anchor Covers

**PLEASE NOTE 9/16-12 IS THE MOST COMMON SIZE**

## MEASURING YOUR ANCHOR STUD - Method 1

Cut out the 9/16 Anchor Size measurement strip below.  
Wrap the measurement strip around your anchor.

If the ends of the strip come close to touching or overlap by a touch, your anchor size is 9/16.  
If the ends of the strips leaves a significant gap then your anchor size is 5/8.

See pictures below as an example.

*Above image shows the measurement strip correctly wrapped around a 9/16 anchor. There maybe a small gap or an overlap by approx. 1/32" depending upon the manufacturing tolerance of the anchor.*

*Above image shows the measurement strip correctly wrapped around a 5/8 Anchor. Notice the gap the strip is leaving. This is a clear indication that your anchor is 5/8 in size.*

## MEASURING YOUR ANCHOR STUD - Method 2

Go to your local hardware store (Home Depot..ect) and purchase a 5/8-11 bolt at least an "1 long.  
Try and screw this into your existing anchor socket, if it screws in you need to order the 5/8-11 size.  
If it **DOES NOT** then you need to purchase the 9/16-12 size

5/8-11 Bolt 1" Long
